Professional Summary

Computer Science and Software Development student pursuing a degree in Analysis and Systems Development at Unipê. Hands-on experience with Python, Django, and Django REST Framework, including web application development, REST API design, relational database modeling, user authentication, and third-party API integration. Expanding knowledge into TypeScript, Node.js, and modular software architecture. Uses Git, GitHub, Linux, and generative AI tools to support development, code review, documentation, and continuous technical growth. Proficient in English (C1).

Education

Unipê	João Pessoa, PB, Brazil
Analysis and Systems Development	2026 – 2027 In Progress

Projects and Technical Practice

CineTrack – Series Tracking & Catalog Platform	Python, Django, Django REST Framework, SQLite, TVmaze API, Git
--	--

- Developed a full-stack web application for TV series discovery, watch history tracking, and user favorites management.
- Architected backend RESTful endpoints with Django REST Framework using Serializers, ViewSets, and Routers for scalable resource consumption.
- Integrated the TVmaze REST API to query and dynamically synchronize global series catalogs and metadata in real time.
- Implemented user authentication, session-based access control, CSRF security, and user-isolated viewing records.
- Constructed dynamic interfaces using Django Templates and Jinja, directly connected to SQLite persistence via Django ORM.

Backend User Management & Authentication API	TypeScript, Node.js, REST API, JWT, ORM, Git
--	--

- Designing a modular RESTful backend adhering to separation of concerns across controllers, business services, and data layers.
- Implementing secure authentication using JSON Web Tokens (JWT), request payload validation, and password encryption via hashing.
- Structuring schema definitions and relational CRUD database operations managed through an Object-Relational Mapper (ORM).

Radio Studio Reservation & Scheduling System	Python, Django, Relational Database Modeling, REST API
--	--

- Modeled business logic and relational database schemas to manage shared studio infrastructure across two broadcasting stations.
- Designed Entity-Relationship Models (ERD) accounting for timeslot availability, technical verification status, and maintenance windows.
- Planned RESTful endpoints for conflict-free schedule consultation and automated booking transactions.

Development Environment and Technical Practice

- Uses Git and GitHub to maintain version-controlled repositories, write structured commits, and document workflows.
- Uses Linux, CLI terminal commands, and Visual Studio Code to configure isolated development environments and troubleshoot issues.
- Uses generative AI tools as part of technical research, architectural exploration, documentation, and continuous learning.

Technical Skills

- Programming:** Python, TypeScript, C, SQL fundamentals, algorithms, data structures, functions, conditional logic, input validation.
- Backend & Web:** Django, Django REST Framework (DRF), Node.js, RESTful APIs, JWT, authentication, sessions, CRUD, ViewSets, Serializers, HTML5, CSS3.
- Databases:** SQLite, relational database modeling (ERD), Django ORM, schema design, data normalization.
- Testing & Security:** Access control, password hashing, token validation, CSRF protection, error handling.
- Development Practices:** Git, GitHub, Linux, terminal, clean code, modular architecture, separation of concerns, technical documentation.

Tools

Python, Django, Django REST Framework, Node.js, TypeScript, SQLite, Git, GitHub, Linux, Visual Studio Code, Postman, TVmaze API, and generative AI tools.

Languages

- Portuguese:** Native.
- English:** Advanced (C1), with full fluency for reading technical documentation, writing clean specifications, and technical communication.

Strengths

Logical reasoning, structured problem solving, backend architectural comprehension, autonomy, continuous learning, and clear documentation.
